

# PROJECT INFORMATION SHEET

as of 24 FEB 04

**PROJECT:** Kinnickinnic River, Wisconsin

**DESCRIPTION:** The project consists of removing two (2) drop structures and approximately 11,075 feet of an existing concrete channel lining from downstream of 27<sup>th</sup> Street to just past 6<sup>th</sup> Street in Milwaukee, Wisconsin. The Kinnickinnic River watershed has a drainage area of approximately 31.8 square miles and eventually flows into Lake Michigan. The proposed project would restore the Kinnickinnic River channel to a more natural stream condition with meanders, shelter areas, and riffle pool complexes. Rocky and deeper water areas would be created in order to provide refuge for fish to feed and rest from predators, extreme currents, and summer sun. The removal of the drop structures would also improve upstream passage for spawning

**STATUS:** The Preliminary Restoration Plan (PRP) was sent to the non-Federal sponsor, Milwaukee Metropolitan Sewerage District (MMSD), for comments on 18 December 2002. MMSD indicated that they wanted to change the scope of the project by splitting the project into two Section 206 projects. The Corps is waiting for MMSD to send in a new Section 206 request letter. Upon receipt of that letter, the Corps will initiate a new PRP and revise the PRP completed in December 02. **However, because of budget constraints within the Section 206 program, no new Section 206 projects will be started in FY04.**
